

TECHNA®

VACUUM PACKAGING MACHINES

TECHNA vacuum machines based on Henkelman are originally equipped with a BUSCH or Becker pump. They feature Soft Air technology, pre-equipment for gas injection, one or more sealing bars, and the new generation ACS control system. This includes functions such as the jar program, the marinade program, and the ability to store up to 20 programs, along with a maintenance kit. A ZEBRA ZD410 printer can be connected to all devices equipped with the ACS control system.

Boxer Machines

Boxer vacuum packaging machines ensure a simple and secure vacuum packaging process. They come standard with the unique ability to store your settings in the memory of 10 programs.
